

Solutions Engineer | 12 Years in IT | Infrastructure Documentation & Integration

Infrastructure SME and documentation owner with 12 years in IT, specializing in complex multi-system portfolios within regulated environments. Serves as the technical point of contact between business systems and implementation teams, translating vendor and integration requirements into actionable direction, validating outcomes, and maintaining authoritative documentation of system architecture and dependencies. Working familiarity with SAML/SSO federation, TLS/PKI, and cloud infrastructure in a coordination and oversight capacity.

Professional Skills

Platforms

- Linux
- macOS

Methodologies

- SDLC
- ITIL
- Agile

Functional Skills

- Technical Writing & Documentation
- Knowledge Management
- Architecture Decision Records (ADRs)
- Business Process Improvement

Technical Skills

- SAML 2.0 & SSO Federation
- TLS/PKI Certificate Management
- Cloud Infrastructure (AWS)
- Information Security
- Networking
- Load Balancing & WAF (NetScaler)
- VPN & Firewall Architecture

Certifications

- AWS Certified Solutions Architect – Associate
- Certified ScrumMaster (CSM)
- ISC2 Certified in Cybersecurity (CC)

Professional Experience

Solutions Engineer Weill Cornell Medicine	December 2023 – Present
• Serve as the infrastructure subject-matter expert and technical point of contact for the research administration portfolio, consulted on new integrations and infrastructure changes. Define the work required of implementation teams such as Infrastructure/Operations and Identity Management, then validate that delivered outcomes meet the requirement. • Led a multi-month SAML x509 certificate remediation project across five production research systems, coordinating between Identity Management and three external vendors to define requirements and validate a zero-downtime dual-certificate rollover strategy across all environments. • Established and maintain an Architecture Decision Record (ADR) practice for the research administration infrastructure portfolio, documenting technical decisions and their rationale to support long-term maintainability and institutional knowledge retention. • Designed and completed a comprehensive service dependency matrix mapping upstream and downstream relationships across all research administration services, identifying previously undocumented dependencies and providing critical data for incident impact assessments. Delivered team training to establish it as a shared resource. • Developed and maintain a TLS certificate renewal process for all research administration systems, coordinating with Infrastructure/Operations, external vendors, and central research offices to ensure timely renewals. Now in its fourth year as a largely self-sustaining operational routine. • Authored current- and future-state multi-cloud architecture diagrams for the research systems portfolio to support strategic planning. • Supporting an enterprise SAP-to-Workday migration by documenting existing system integrations and data feeds to inform integration planning and implementation.	
Technical Specialist Weill Cornell Medicine	July 2022 – December 2023

- Collaborated with the Solutions Architect to establish and maintain a holistic research administration application architecture.
- Maintained detailed documentation of technical features across the research administration portfolio.
- Contributed to SDLC process enhancements and solution design discussions.
- Assisted in identifying optimal methods to deliver required business functions based on specified business requirements.

IT Business Analyst | Weill Cornell Medicine

December 2017 – July 2022

- Managed and liaised with stakeholders to collect business requirements and create functional and technical specifications.
- Led project planning, workflow development, training, documentation, and administrative approvals required to advance over 5,000 Weill Cornell research studies.
- Designed business process workflow diagrams to identify potential improvements in business operations.
- Conducted quality control testing and gap analysis to create and improve workflows and business processes.

Application Support Analyst II | Weill Cornell Medicine

October 2015 – December 2017

- Provided Tier 2 end-user support for research application modules.
- Provisioned user access rights to research application modules.
- Collaborated with lead analysts in the implementation, testing, and training for new and enhanced functionality.
- Created and developed knowledge base in ServiceNow to store documentation, procedures, and solutions.

Systems Support Analyst | ClickIT Inc.

November 2013 – October 2015

- Provided Tier 1 end-user support for Microsoft Windows based systems and proprietary surveillance software.
- Conducted testing and analysis to enhance video analytics software.
- Created and maintained company knowledge base.

Education

Certificate in Systems Design

2021

Cornell University, Ithaca, NY

Master of Science in Information Systems

2011 – 2014

Long Island University, New York, NY

Bachelor of Science in Information Systems

2006 – 2011

Long Island University, New York, NY
